House Price Dataset — Exploratory Data Analysis

Summary statistics for the sales price variable

SalePrice statistic	Value
Mean	$180,921
Median	$163,000
Standard deviation	$79,443
Minimum–maximum	$34,900–$755,000

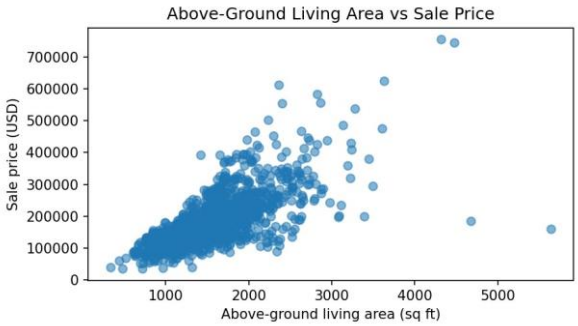

Strongest positive numerical correlations with Sales Price

Sales Price distribution

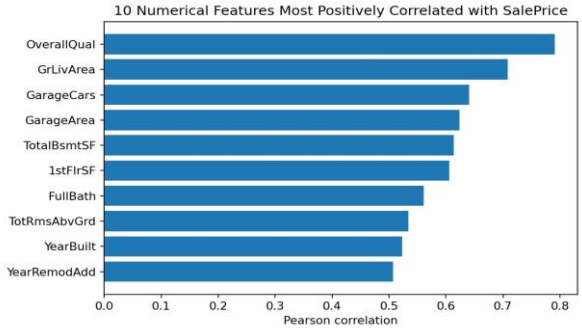

The distribution is right-skewed (skewness ≈ 1.883): most homes are below the highest observed prices, with a smaller number of expensive homes.

Living area vs sales price

Ground living Area has a strong positive linear correlation with Sales Price (r ≈ 0.709), though there is variation around the overall trend.

Top positive correlations

Overall Quality has the strongest positive correlation (r ≈ 0.791).

Conclusion: Sale prices vary widely and are right-skewed. Overall quality and above-ground living area are the two strongest positive numerical correlates among the measured features examined.
